

SERVICE MANUAL

STEREO RECEIVER SX-939 KCU, F, GN

NOTE:

MODEL SX-939 COMES IN THREE VERSIONS DISTINGUISHED AS FOLLOWS:

Round label on rear panel	Voltage	Type
KCU F	120V only 110V, 120V, 130V 220V and 240V (switchable)	UL (U.S.A.) and CSA (Canada) approved.
GN	220V only	General export model SEMCO (Sweden), NEMCO (Norway) and DEMCO (Denmark) approved.

CONTENTS

About 220V only model labeled "GN"

This model whose rear panel is labeled "GN" circular mark operates only on 220V, substantially in its circuit design from two other models. When repairing this model, please see the manual on page 71 and the followings which include such items as Circuit connection diagram, Miscellaneous parts list, Schematic diagram of power supply circuit assembly, P.C. board pattern and its parts list.

Before servicing, also please do not fail to check to see if the "GN" mark is labeled on the rear panel.

1. SPECIFICATIONS

SEMICONDUCTORS

FETs	3
ICs	4
Transistors	57
Diodes	39

AMPLIFIER SECTION

Continuous Power Output

20Hz~20kHz

(Both channels driven) 70W + 70W (8Ω), 80W + 80W (4Ω)

1kHz (Both channels driven) 75W + 75W (8Ω), 100W + 100W (4Ω)

Harmonic Distortion

(20Hz~20kHz Continuous

Power Output) Less than 0.3%

(1W + 1W, Power Output) Less than 0.05%

Intermodulation Distortion

(Continuous Power Output) Less than 0.3%

(1W + 1W, Power Output)..... Less than 0.05%

Power Bandwidth

(IHF, Both channels driven) 5Hz~40kHz (T.H.D. 0.3%)

Frequency Response 7Hz~100kHz

Input Sensitivity/Impedance

POWER AMP IN 1V/50kΩ

Output

Speaker A, B, C, A + B, A + C, B + C (4Ω~16Ω)

Headphone 4Ω~16Ω

Damping Factor

(1kHz, 8Ω) More than 45

Hum & Noise

(IHF, short-circuited,

A Network) More than 110dB

Residual Hum & Noise

(8Ω, Pre & Power amplifier) Less than 1mV

PREAMPLIFIER SECTION

Input Sensitivity/Impedance

PHONO 1 2.5mV/50kΩ

PHONO 2 2.5mV/50kΩ

PHONO Overload Level

(rms/p-p) 250mV/700mV

MIC 2.0mV/50kΩ

AUX 150mV/70kΩ

TAPE PB 1, 2 150mV/70kΩ

TAPE PB 2 (DIN connector)..... 150mV/70kΩ

Output Level/Impedance

TAPE REC 1, 2 150mV

TAPE REC 2 (DIN connector) 30mV/80kΩ

PRE OUT 1V/1kΩ

Harmonic Distortion

(20Hz~20kHz) Less than 0.1%

Frequency Response

PHONO (RIAA equalization) 30Hz~15kHz±0.3dB
AUX, TAPE PB 10Hz~40kHz⁺⁰₋₁ dB

Tone Control

BASS:

MAIN ±10dB (100Hz)
SUB ±5dB (50Hz)

TREBLE:

MAIN ±10dB (10kHz)
SUB ±5dB (20kHz)

Filter

LOW Cut -8dB (50Hz) 6dB/oct.
HIGH Cut -9dB (10kHz) 6dB/oct.

Loudness Contour

(Volume control set at
-40dB position) +8dB (100Hz), +4dB (10kHz)

Hum & Noise

(IHF, short-circuited, A
Network)

PHONO More than 70dB
MIC More than 65dB
AUX, TAPE PB More than 95dB

Muting -20dB

FM SECTION

Usable Sensitivity (IHF) 1.8µV
Capture Ratio (IHF)..... 1.0dB
Selectivity (IHF) 80dB
Signal-to-Noise Ratio 70dB
Image Rejection (98MHz) 85dB
IF Rejection (98MHz) 100dB
Spurious Rejection..... 100dB
AM Suppression 55dB

Harmonic Distortion:

MONO Less than 0.2%
STEREO Less than 0.4%

Frequency Response 20Hz~15kHz-^{+0.2}_{2.0} dB
50Hz~10kHz^{+0.2}_{0.5} dB

Stereo Separation:

1kHz More than 40dB
50Hz~10kHz More than 30dB

Sub Carrier Suppression 65dB

Antenna Input 300Ω Balanced, 75Ω Unbalanced

Muting ON-OFF

AM SECTION

Sensitivity	
(IHF, Ferrite antenna)	300 μ V/m
(IHF, Ext. antenna)	15 μ V
Selectivity	40dB
Signal-to-Noise Ratio	50dB
Image Rejection.....	65dB
IF Rejection	85dB

MISCELLANEOUS

Power Requirements	AC 120V 60Hz or 110, 120, 130, 220 and 240V (switchable) 50/60Hz
Power Consumption	290W (UL approved model only) 470W (5 line voltage model only)
Dimensions	520 (W) x 175 (H) x 420 (D) mm 20-1/2 x 6-7/8 x 16-9/16 in.
Weight:	
Without Package	18.5 kg (40 lb 11 oz)
With Package	22.6 kg (49 lb 12 oz)

FURNISHED PARTS

FM T-type Antenna	1	
Operating Instructions	1	
Fuse 6A	1	} (5 line voltage model only)
Fuse 3A	1

2. FRONT PANEL FACILITIES

FRONT PANEL FACILITIES

SPEAKER BUTTONS

Each of speaker systems A, B, and C is connected to each of output terminals A, B, and C.

By pushing the following:

- SPKR-A Speaker systems A into operation
- SPKR-B Speaker systems B into operation
- SPKR-C Speaker systems C into operation

NOTES:

1. When any two pairs of the buttons (A + B, B + C, C + A) are depressed, the corresponding pairs of speaker systems will come into operation. However, operating all three buttons even though depressed at the same time is not possible.
2. Only when listening through headphones, press again the SPKR button(s) in use to OFF (undepressed) from the ON position (pressed)

POWER SWITCH

Turn this switch ON but wait for some 3 to 6 seconds, during the silence of which the protection circuit eliminates the unpleasant noise not imputed to a receiver fault.

PHONES (1, 2) OUTPUT JACKS

Accept two pairs of headphones.

BASS CONTROLS

Adjust bass tone quality.

- 100Hz For the low frequencies below 400Hz. Possible up to 10dB of increasing or reducing at 100Hz in 2dB steps.
- 50Hz After adjustment by the 100Hz control, further adjust frequencies below 80Hz by this control, if necessary. Possible up to 5dB of increasing or reducing in bass response at 50Hz in 2.5dB steps.

LOW CUT, HIGH CUT BUTTONS

- LOW When the low-pitched rumble (turntable motor or other source) is obtrusive, depress the LOW CUT button to ON. In no interference, leave it undepressed (OFF).
- HIGH When the high frequency scratch noise (records or other source) is much, depress this button to ON. In no interference, leave it undepressed (OFF).

TONE SWITCH

When in the ON (up) position, this switch causes the amplifier section to operate with a flat frequency regardless of the tone control settings. Use this switch to check the audio characteristics of your listening room such as when it is necessary to check the tone quality of phono cartridges and speakers and also to particularly set the tone controls to be assessed.

SIGNAL METER

For AM and FM station tuning.

- AM tuning: Tune the dial pointer so that the SIGNAL meter needle comes to the extreme right.
- FM tuning: Both the SIGNAL and FM TUNING meters work together. The optimum point of the SIGNAL meter needle is the same as in AM tuning. Then use the FM TUNING meter.

FM TUNING METER

While getting the SIGNAL meter needle going to the right, make fine adjustment with the FM TUNING meter whose needle comes to the center (indicating the optimum reception).

FM STEREO INDICATOR TUNING KNOB

FUNCTION SELECTOR BUTTONS

For selecting the program source, push each button as follows:

- AM For AM broadcast reception.
- FM For FM broadcast reception. The STEREO indicator lights up when the broadcast is in stereo.
- PHONO 1 For operating a turntable connected to the PHONO 1 input jacks.
- PHONO 2 For operating a turntable connected to the PHONO 2 input jacks.
- MIC For using a microphone. Not possible to mix with other program source.
- AUX For listening to audio equipment (cartridge tape player, TV sound tuner, etc.) connected to the AUX input jacks.

DIMMER SWITCH

Dims the brightness of the indicator light. Press again to restore full brightness.

FM MUTING BUTTON

Leave this button undepressed (in the ON position) while tuning in FM stations. Inter-station noise may interfere with FM reception while tuning between stations. To suppress this noise, leave the MUTING button undepressed (in the ON position). If the low signal strength is due to distance from the transmitter or other influences, depress this button, at which the weak station will be heard with the MUTING "OFF."

LOUDNESS BUTTON

Depress this button to listen at low volume. The human ear's frequency response varies according to the listening volume. The depressed button compensates for hearing response with emphasis on the bass and treble.

MIC INPUT JACKS

L, R For connecting the left and right channel microphones.

NOTE:

Use the high impedance (above 20k Ω) with 6mm diam. phone plugs.

VOLUME CONTROL

Governs both the volume of sound outputs from the speaker systems and from the headphones.

MODE BUTTON

Leave this button undepressed (if necessary, depress this to release it when already depressed) for STEREO playback. For MONO playback, depress it. In this case stereo signals for left and right channels will be mixed into mono signal which will be heard from the center of both speaker systems.

TREBLE CONTROLS

Adjust treble tone quality.

- 10KHz For the high frequencies above 2.5kHz. Possible up to 10dB of increasing or reducing in treble response at 10KHz in 2dB steps.
- 20KHz After adjustment by the 10kHz control, further adjust frequencies above 12kHz by this control, if necessary. Possible up to 5dB of increasing or reducing in treble response at 20kHz in 2.5dB steps.

AUDIO MUTING BUTTON -20dB

Depress this button to mute the audio input to -20dB. No need to turn down the VOLUME control on each occasion for your convenience.

TAPE DUPLICATE SWITCH

Leave this switch in the ON (down) position to duplicate or edit a recorded tape using two tape decks. For normal use, switch over to the OFF (up) position.

BALANCE CONTROL

Adjusts the balance between the sound volume from the left and right speaker systems.

TAPE MONITOR (1, 2) SWITCHES

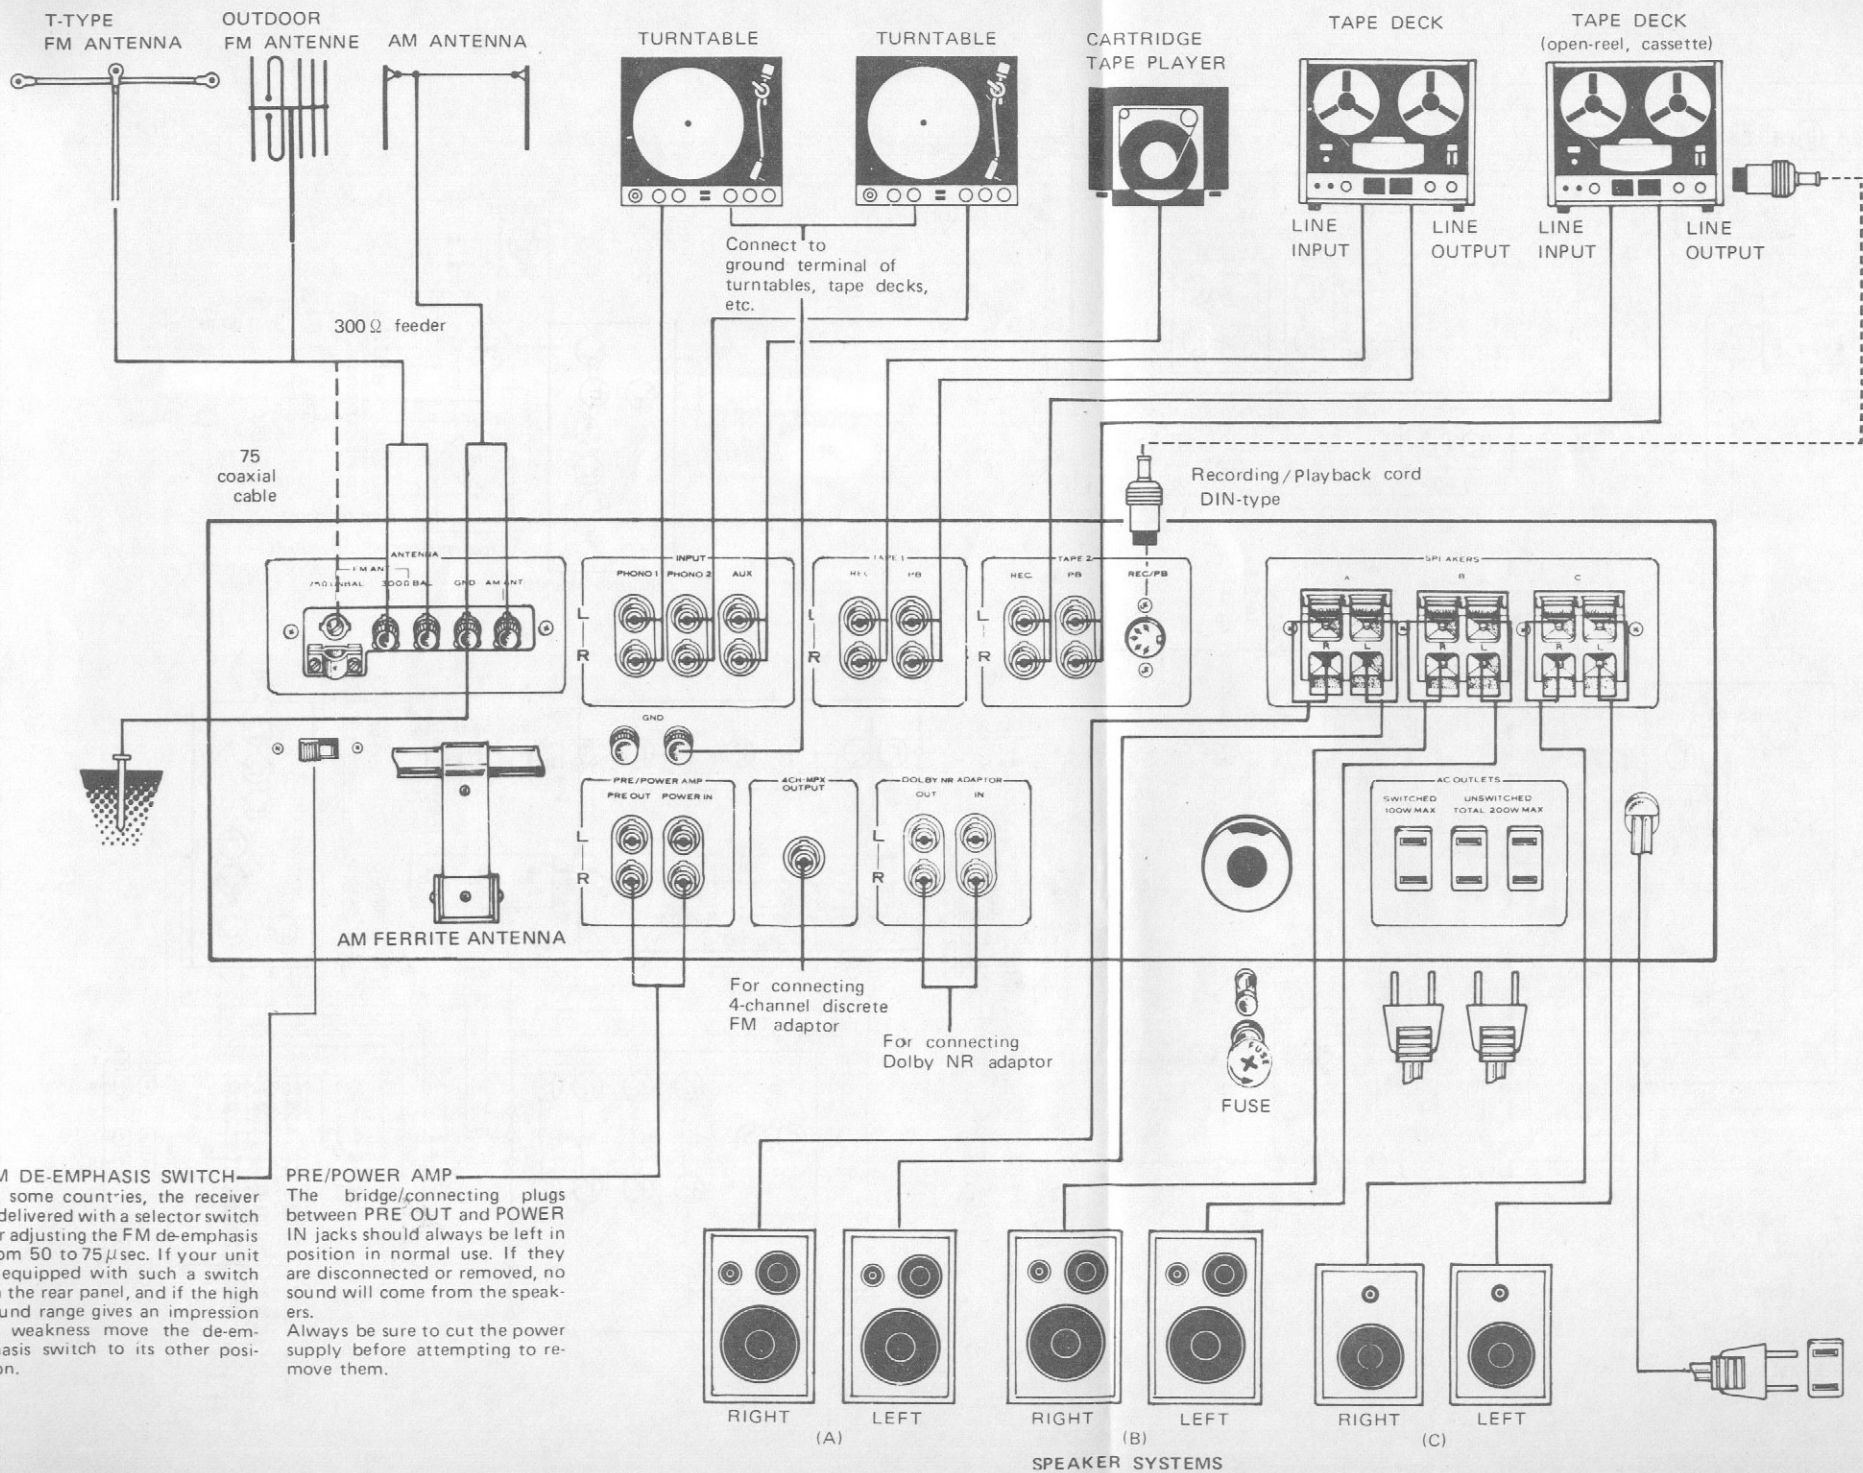

Monitor the recorded sound while recording with a tape deck. Also possible to play back tapes as follows:

- 1 With a tape deck connected to the TAPE 1 jacks (REC and PB), either monitoring of recording in progress or playing back is possible.
- 2 With a tape deck connected to the TAPE 2 jacks (REC and PB or REC/PB connector), the same as in 1 above is possible.

DOLBY NR ADAPTOR SWITCH

When employing Dolby Noise Reduction Adaptor depress this DOLBY NR ADAPTOR to ON.

3. CONNECTION DIAGRAM

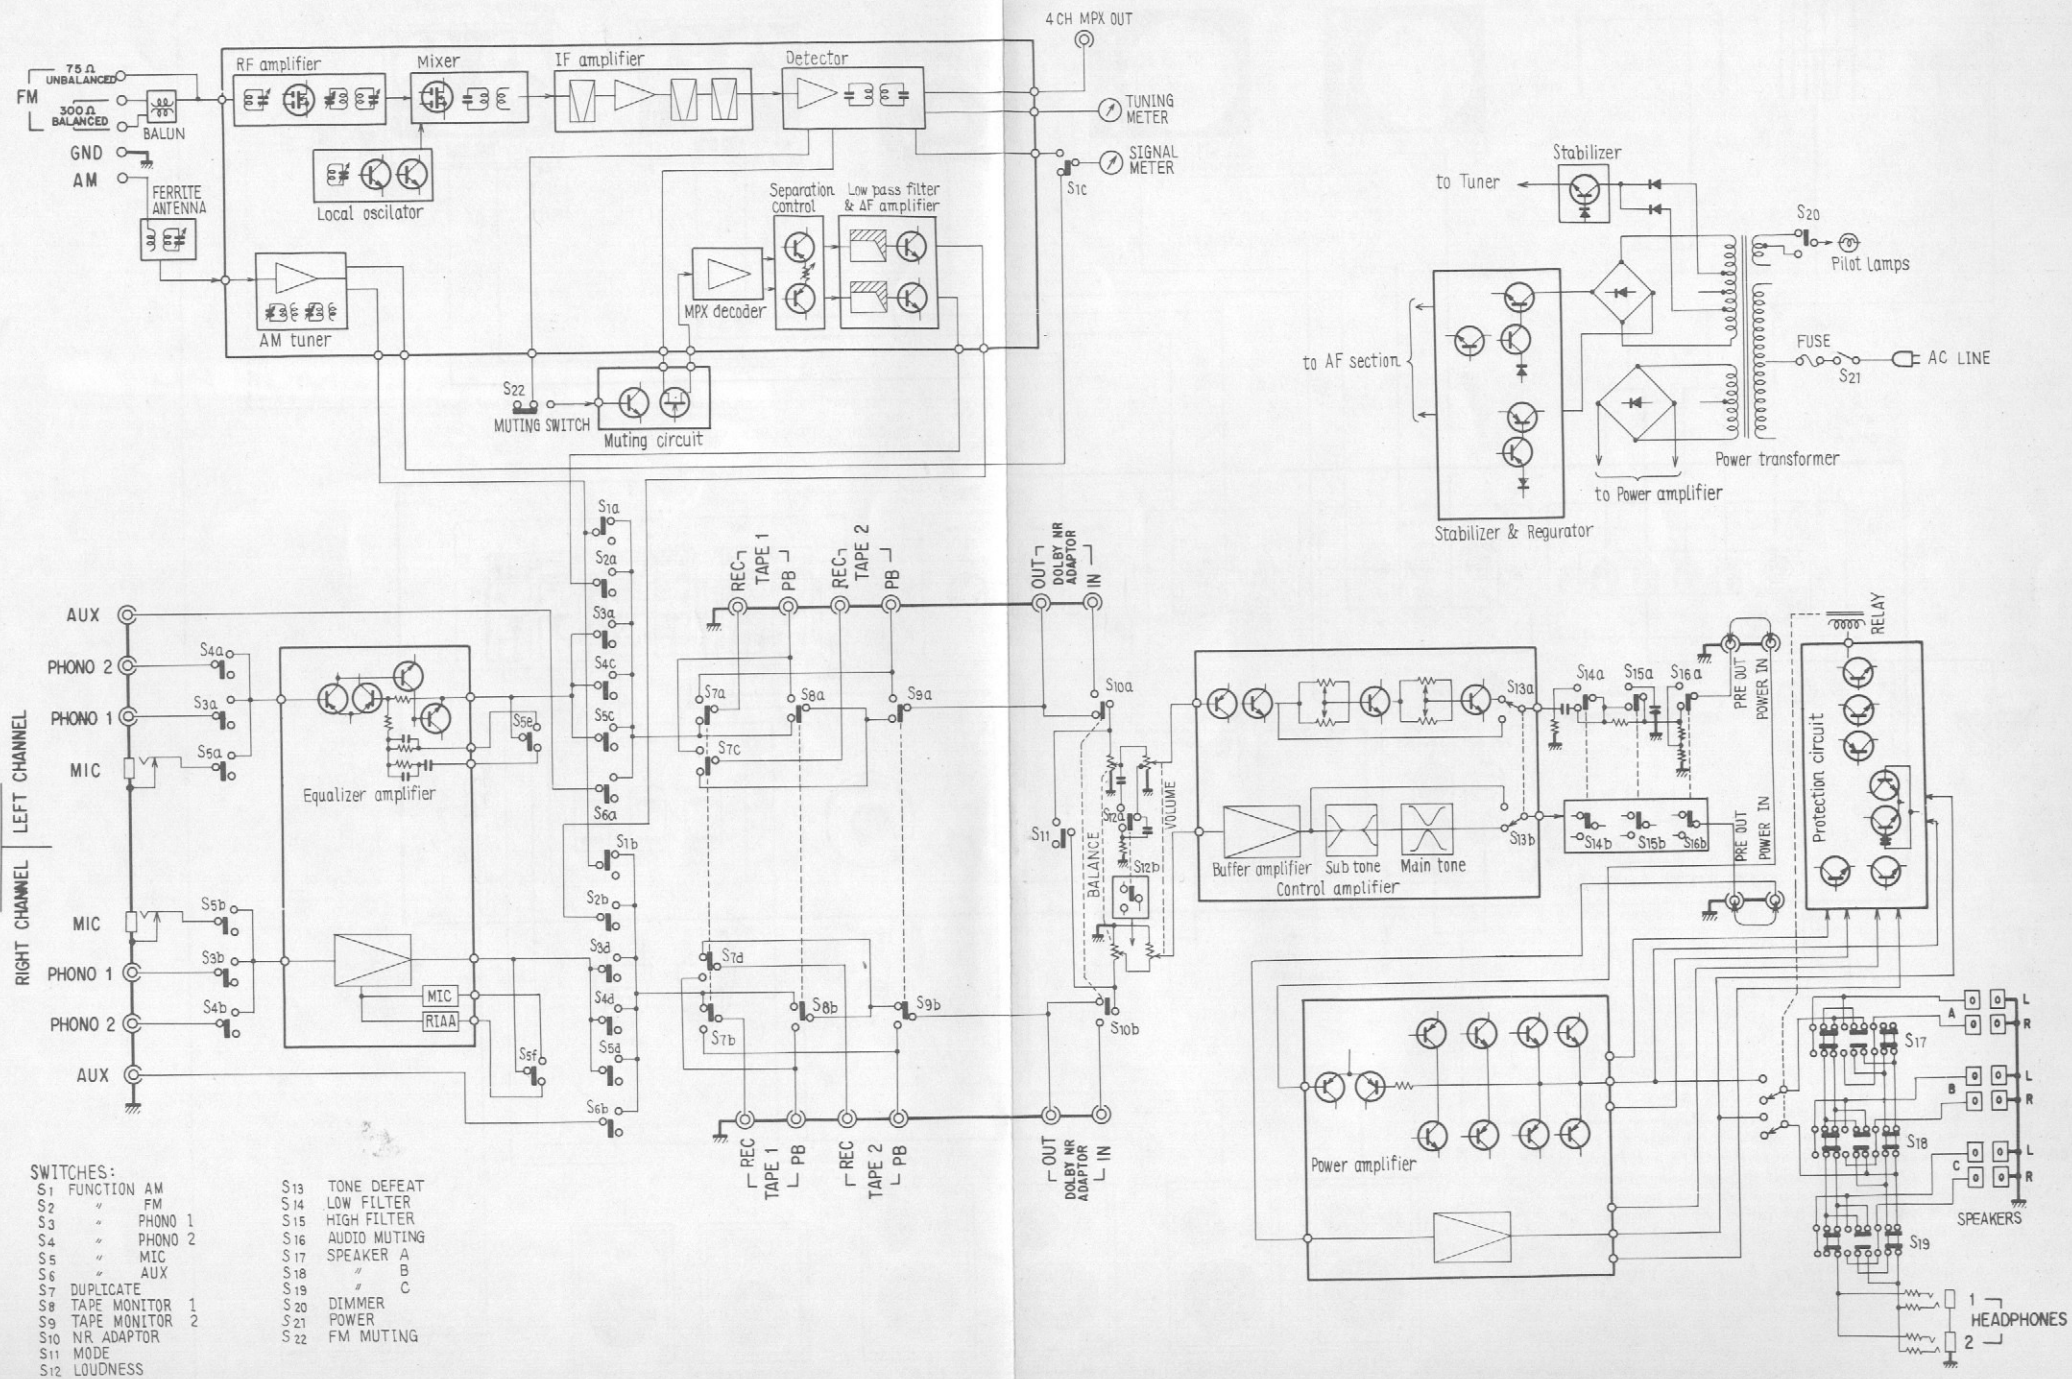

FM DE-EMPHASIS SWITCH
 In some countries, the receiver is delivered with a selector switch for adjusting the FM de-emphasis from 50 to 75 μ sec. If your unit is equipped with such a switch on the rear panel, and if the high sound range gives an impression of weakness move the de-emphasis switch to its other position.

PRE/POWER AMP
 The bridge/connecting plugs between PRE OUT and POWER IN jacks should always be left in position in normal use. If they are disconnected or removed, no sound will come from the speakers. Always be sure to cut the power supply before attempting to remove them.

5. CIRCUIT DESCRIPTION

SIGNAL PATH

1. The FM broadcast signal waveform from the antenna is fed to the two dual-gate MOS field-effect transistor in the front end section for radio frequency amplification. This signal is converted into an intermediate frequency by the dual-gate MOS FET mixer stage in combination with the signal from the local oscillator.
2. The intermediate frequency signal, converted within the front end section, is fed to three ceramic filters and two ICs, where it is tuned, amplified, and detected, becoming an audio frequency (composite) signal. The composite signal following detection is fed to the 4 CH MPX terminal jack and the multiplex decoder stage.
3. The multiplex decoder stage uses one IC for three functions: to demodulate the composite signal into the left and right channel stereo signals, to operate the automatic mode switching between stereo/mono, and to switch the stereo indicator lamp appropriately. The decoding system uses a phase locked loop (PLL) circuit, which assures continuous stable operation and excellent stereo separation with low susceptibility to external noise (such as car ignition noise) and ambient temperature changes. After decoding, the signal is fed to four transistors and one LC filter, where the residual carrier component (38kHz, 19kHz, and SCA) is rejected, and then to the audio amplifier section.
4. The FM muting circuit consists effectively of two circuits, designed to reduce the pulse noise which can so easily arise when a muting circuit is operative. The one circuit is an electronic switch incorporated into the IC, so that the demodulated circuit is switched off and on in the IC, and the other gate circuit the composite signal by means of an FET.
5. The AM tuner section employs one monolithic IC which functions as radio frequency amplifier, frequency converter, local oscillator, intermediate frequency amplifier, and detector. The output is a pure audio signal.
6. The signals which are applied to the MIC and PHONO terminal jacks are selected by the FUNCTION switch before being fed to the first stage of the three-stage differential direct-coupled equalizer amplifier by which the signals are amplified. In order to reduce the switch noise, the circuit configuration employed enables the potential at the input and output terminals to be set at near zero volts.

It incorporates an independent differential circuit in the first stage of the equalizer amplifier whose DC supply uses twin plus and minus.

7. The output from the equalizer amplifier, together with that from the AUX terminal jacks, the audio signal from the AM tuner, and the audio signal from the FM tuner, are all selected by the FUNCTION switch, and pass through the switch circuit for TAPE DUPLICATE, TAPE MONITOR, DOLBY NR ADAPTOR, and the circuits for BALANCE and VOLUME controls, before being fed to the control amplifier.
8. The control amplifier has an extremely high input impedance, using PNP and NPN transistors in a two-stage direct-coupled circuit. This greatly reduces the influence of the performance inherent in equipment connected externally. The output from this two-stage direct-coupled circuit is divided into two circuit systems. One goes to the TONE switch via the twin tone control circuit, and the other goes directly and unmodified in any way to the TONE switch. The TONE switch selects between them.
9. The amplifier section of the twin control has closed loop NFB amplifiers for both the main and sub circuits, each of which has its own transistor, eliminating mutual interference.
10. The control amplifier output is fed to the power amplifier after passing through the LOW FILTER, HIGH FILTER, and AUDIO MUTING circuits. The first stage of the power amplifier is a differential amplifier element, and the second stage uses a constant current load circuit, so that DC potential drift is prevented. On the other hand, the final output stage uses two power transistors in parallel in both the upper and lower circuits, so that large collector dissipation is possible.
11. The power amplifier output is fed to the three push buttons which form the SPEAKER switch. This selects A, B, and C speaker system terminal connection. If all three speaker systems were to be connected simultaneously, the effective speaker impedance might be less than 4Ω . To guard against this possibility, when all three buttons are depressed together, all three systems are disconnected from the amplifier.
12. The protection circuit which guards against DC potentials at the power amplifier output junctions, against speaker complex load im-

pedances less than 4Ω , and shorts across the speaker terminals. Their operation is such that, under the corresponding abnormal condition, a relay acts to separate the output junction and the output circuit. Further,

this protection circuit also helps to mute the unwanted signal which immediately follows the POWER switch ON, and to immediately disconnect the output after switched OFF.

6. LEVEL DIAGRAM

7. DISASSEMBLY

1. To remove the wooden cabinet, first remove the two screws holding each side, then lift the back of the wooden cabinet upward.
2. Pull off all knobs.
3. Remove the two screws in the upper edge of the front panel and remove two nuts and washers. Then pull the panel gently forward.
4. To remove the bottom plate, first remove the ten screws holding it in place.

9. DIAL CORD STRINGING

1. Turn the tuning capacitor so that its plates protrude as much as possible.
2. Tie one end of the string to the spring on the TUNING pulley (attached to the tuning capacitor).
3. Lead the string around pulley A, then wind it three turns around the TUNING shaft.
4. Lead the string around pulleys B, C and D, then wind it 1-1/2 turns around the TUNING pulley.
5. Now tie the other end of the string to the spring on the TUNING pulley. Turn the TUNING shaft and check for proper function. Then trim the ends of the string.
6. Turn the TUNING shaft until the plates of the variable are all the way in. Move the pointer to the left-end starting point on the dial and fasten it to the string in that position.

10. ALIGNMENT PROCEDURE

10.1 ENGLISH

ALIGNING THE FM SECTION

1. SX-939 Control Settings

Set the controls (knob and switches) of the SX-939 as follows:

- POWER: ON
- FUNCTION: FM
- FM MUTING: OFF

2. Connections between Test Equipment and the SX-939

- The output from an FM signal generator should be connected to the 300Ω antenna terminals of the SX-939.
- A distortion meter should be connected to the TAPE REC terminal jacks on the SX-939.
- An AC millivolt meter should be connected to the TAPE REC terminal jacks on the SX-939 in parallel with the distortion meter.

3. Set both the FM signal generator and the SX-939 to indicate 98MHz.

4. Turn the FM signal generator output level down to minimum.

5. Turn the lower core and adjust so that the TUNING meter needle is centered.

6. Increase the FM signal generator output to 60dB, modulated at 400Hz, with a deviation of ±75 kHz.

7. Turn the upper core and adjust so that the distortion is at a minimum.

Steps 4 ~ 7 above should be repeated several times in succession, until no significant improvement is obtained.

8. Set the FM signal generator output level to 10dB, modulated at 400Hz, with a frequency deviation of ±75 kHz.

9. Adjust for maximum output at 90MHz.

10. Adjust for maximum output at 106MHz.

11. Adjust for maximum output at 90MHz.

12. Adjust for maximum output at 106MHz.

Steps 11 ~ 12 above should be repeated several times in succession, until no further significant improvement is obtained.

ALIGNING THE FM MPX SECTION

Notes: This set of adjustments should not be carried out until the alignment of the FM section (1 ~ 12 above) has been completed.

The multiplex signal generator should be connected to the external modulator terminals of the FM signal generator.

1. SX-939 Control Settings

Set the controls (knob and switch) of the SX-939 as follows:

POWER: ON

FUNCTION: FM

FM MUTING: OFF

2. Connections between the Test Equipment and the SX-939

- The output from the FM signal generator should be connected to the 300Ω antenna terminals of the SX-939.
- The output from the MPX signal generator should be connected to the external modulator terminals of the FM signal generator.
- The oscilloscope X plates (horizontal inputs) should be connected to the PILOT OUT terminals on the MPX signal generator, and the Y plates (vertical inputs) to terminal number 18.
- The AC millivolt meter should be connected to the TAPE REC terminals (with changeover possible from L to R channels).

3. Multiplex Signal Generator Modulation

L + R (1kHz): 67.5kHz deviation

PILOT (19kHz): 7.5kHz deviation

4. Set the FM signal generator output to minimum.

5. Adjust for a stationary Lissajous waveform on the oscilloscope.

6. Reset the FM signal generator to 60dB level output, and modulate either the L or R channel.

7. Adjust for the maximum separation.

ALIGNING THE AM SECTION

1. SX-939 Control Settings
Set the controls (knob and switch) of the SX-939 as follows:
POWER: ON
FUNCTION: AM
2. Connections between Test Equipment and the SX-939
 - Connect the AM signal generator to the AM antenna terminals (in series with a 1 k Ω dummy resistor).
 - Connect the AC millivolt meter to the TAPE REC terminal jacks.
3. Set the AM signal generator to 30% modulation at 400Hz.
4. Set the AM signal generator output to 30dB at 600kHz.
Adjust for maximum output (Carry out the ferrite loopstick antenna core adjustment at the same time).
5. Adjust for maximum output with the frequency set at 1,400kHz.
Adjustments 4 ~ 5 above should be repeated several times until no further significant improvement is obtained.
6. Connect the AM signal generator directly to the AM ANT (antenna) terminals.
7. With a frequency of 1,400kHz and an AM signal generator output of 36dB, adjust for a low frequency output of 70mV.
8. With an AM signal generator output of 80dB, adjust for a low frequency output of 310mV.

ALIGNING THE POWER AMPLIFIER SECTION

1. Nothing should be connected to the input jacks of the SX-939, and an 8 Ω dummy resistor should be connected across the speaker terminals.
2. A DC millivolt meter should be connected across between terminal number 10 (25) and earth.
3. Adjustment should be made to bring the voltage to zero.
4. The DC voltmeter should be connected between terminals number 50 (38) and 44 (32).
5. Adjustment should be made to bring the voltage to 50mV.

120V ONLY MODEL AND 5 LINE VOLTAGE MODEL

- SWITCHES**
- S1 : AM
 - S2 : FM
 - S3 : PHONO 1 FUNCTION
 - S4 : PHONO 2 SELECTOR
 - S5 : MIC
 - S6 : AUX
 - S7 : DUPLICATE
 - S8 : TAPE MONITOR 1
 - S9 : TAPE MONITOR 2
 - S10 : DOLBY NR ADAPTOR
 - S11 : STEREO - MONO
 - S12 : LOUDNESS
 - S13 : TONE DEFEAT
 - S14 : LOW FILTER
 - S15 : HIGH FILTER
 - S16 : AF MUTING
 - S17 : SPKR A
 - S18 : SPKR B
 - S19 : SPKR C
 - S20 : POWER
 - S21 : RELAY
 - S22 : DIMMER
 - S23 : FM MUTING
- RESISTORS**
IN OHM, 5W, ±5% TOLERANCE UNLESS OTHERWISE NOTED. K : K Ω M : M Ω
- CAPACITORS**
IN μF UNLESS OTHERWISE NOTED. P : pF
- NOTES**
- SIGNAL VOLTAGE NECESSARY FOR OBTAINING 99W/8 OUTPUT POWER (1KHZ).
 - DC VOLTAGE AT NO INPUT SIGNAL.
 - DC CURRENT AT NO INPUT SIGNAL.

NOTE:
NO SWITCH (S24) IS PROVIDED FOR 120V MODEL, BUT CAPACITORS (C5 & C6) ARE PROVIDED.

- CAPACITORS: IN μ F UNLESS OTHERWISE NOTED p: pF.
- RESISTORS: IN Ω , $\frac{1}{4}$ W UNLESS OTHERWISE NOTED k: k Ω , M: M Ω .

Miscellaneous Parts

10.2 ABGLEICHVERFAHREN (GERMANY)

ABGLEICHEN DES FM-TEILS

1. Regeleinstellungen am SX-939

Die Steuerelemente (Knöpfe und Schalter) des SX-939 sind wie folgt einzustellen:

POWER (Stromzuführung): ON (Ein)

FUNCTION (Funktion): FM

FM MUTING (FM-Dämpfung): OFF (Aus)

2. Schaltungen zwischen Prüfsatz und dem SX-939

• Der Ausgang von einem FM-Prüfsender ist mit den 300-Ohm-Antennenanschlüssen des SX-939 zu verbinden.

• Ein Klirrfaktormeßgerät ist mit den Anschlußbuchsen des SX-939 TAPE REC (Band-aufnahme) zu verbinden.

• Ein Millivolt-Wechselspannungsmesser ist parallel zum Klirrfaktormeßgerät mit den Anschlußbuchsen TAPE REC (Band-aufnahme) des SX-939 zu verbinden.

3. Der FM-Prüfsender und der SX-939 sind beide auf eine Anzeige von 98 MHz einzustellen.

4. Der Ausgangspegel des FM-Prüfsenders ist auf minimale Einstellung herunterzudrehen.

5. Der untere Kern ist zu drehen und so einzustellen, daß die Nadel des Abstimm-Meters zentriert ist.

6. Der Ausgang des FM-Prüfsenders ist, moduliert bei 400 Hz bei einer Abweichung von ± 75 kHz, auf 60 dB zu erhöhen.

7. Der obere Kern ist zu drehen und so einzustellen, daß die Verzerrung minimal wird. Obige Schritte 4 - 7 sollen mehrmals nacheinander wiederholt werden, bis keine merkliche Verbesserung erzielt wird.

8. Der Ausgangspegel des FM-Prüfsenders ist, moduliert bei 400 Hz bei einer Frequenzabweichung von ± 75 kHz, auf 10 dB einzustellen.

9. Es ist auf maximalen Ausgang bei 87,4 MHz einzustellen.

10. Es ist auf maximalen Ausgang bei 106 MHz einzustellen.

11. Es ist auf maximalen Ausgang bei 90 MHz einzustellen.

12. Es ist auf maximalen Ausgang bei 106 MHz einzustellen.

Obige Schritte 11 - 12 sind mehrfach nacheinander zu wiederholen, bis keine weitere merkliche Verbesserung erzielt wird.

ABGLEICHEN DES FM-MPX-TEILS

Zur Beachtung:

Die folgenden Einstellschritte sollten nicht vor Beendigung des Abgleichs des FM-Teils (siehe oben 1 - 12) durchgeführt werden. Der Multiplex-Prüfsender ist mit den Außenmodulatoranschlüssen des FM-Prüfsenders zu verbinden.

1. Regeleinstellungen am SX-939

Die Steuerelemente (Knöpfe und Schalter) des SX-939 sind wie folgt einzustellen:

POWER (Stromzuführung): ON (Ein)
FUNCTION (Funktion): FM (UKW)
FM MUTING (FM-Dämpfung): OFF (Aus)

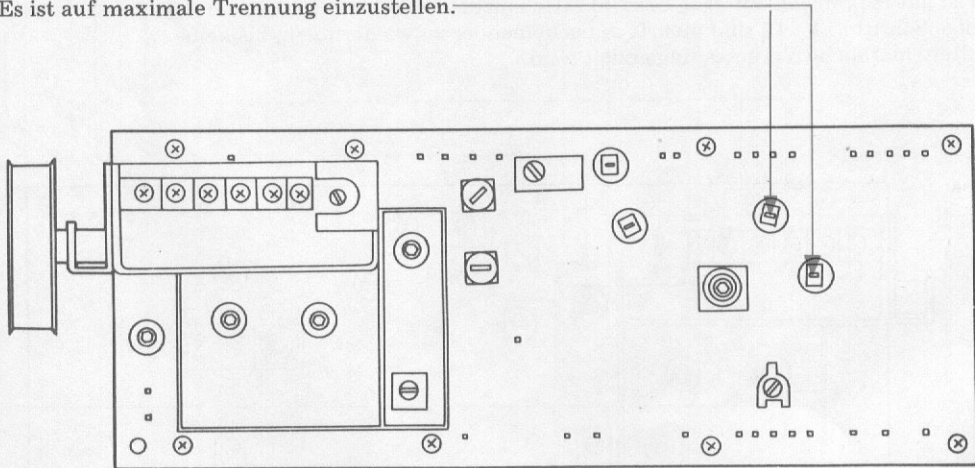

2. Schaltungen zwischen Prüfsatz und dem SX-939

- Der Ausgang vom FM-Prüfsender ist mit den 300- Ω -Antennenanschlüssen des SX-939 zu verbinden.
- Der Ausgang vom MPX-Prüfsender ist an die Außenmodulatoranschlüsse des FM-Prüfsenders anzuschließen.
- Die x-Anoden des Oszilloskops sind mit den Anschlüssen PILOT OUT am MPX-Prüfsender und die y-Anoden mit dem Anschluß 18 zu verbinden.
- Der Millivolt-Wechselspannungsmesser ist mit den TAPE REC (Band-aufnahme)-Anschlüssen (mit Umschaltmöglichkeit von den Kanälen LH auf RH) zu verbinden.

3. Modulation des Multiplex-Prüfsenders

L + R (1 kHz): Abweichung von 67,5 kHz
PILOT (19 kHz): Abweichung von 7,5 kHz

4. Der Ausgang des FM-Prüfsenders ist auf minimales Niveau einzustellen.
5. Am Oszilloskop ist eine Einstellung auf eine stehende Wellenform der Lissajousschen Figur durchzuführen.
6. Der FM-Prüfsender ist auf einen Pegelausgang von 60 dB zurückzustellen und entweder der LH- oder der RH-Kanal zu modulieren.
7. Es ist auf maximale Trennung einzustellen.

ABGLEICHEN DES AM-TEILS

1. Regeleinstellungen am SX-939
Die Steuerelemente (Knöpfe und Schalter) des SX-939 sind wie folgt einzustellen:
POWER (Stromzuführung): ON (Ein)
FUNCTION (Funktion): AM
2. Schaltungen zwischen Prüfsatz und dem SX-939
 - Der AM-Prüfsender ist mit den AM-Antennenanschlüssen (in Reihenschaltung mit einem künstlichen Widerstand von $1\text{ k}\Omega$) zu verbinden.
 - Der Millivolt-Wechselspannungsmesser ist mit den Anschlußbuchsen TAPE REC (Band-aufnahme) zu verbinden.
3. Der AM-Prüfsender ist auf eine Modulation von 30 % bei 400 Hz einzustellen.
4. Der Ausgang des AM-Prüfsenders ist auf 30 dB bei 600 kHz einzustellen. Es ist der maximale Ausgang bei gleichzeitiger Einstellung des Ferritstabantennenkerns einzustellen.
5. Es ist der maximale Ausgang bei einer Frequenzeinstellung auf 1400 kHz einzustellen. Obige Einstellungen 4 - 5 sind mehrfach zu wiederholen, bis keine weitere merkliche Verbesserung erzielt wird.
6. Der AM-Prüfsender ist direkt mit den Anschlüssen AM ANT (Antenne) zu verbinden.
7. Bei einer Frequenz von 1400 kHz und einem Ausgang des AM-Prüfsenders von 36 dB ist auf einen Niederfrequenzausgang von 70mV einzustellen.
8. Bei einem Ausgang des AM-Prüfsenders von 80 dB ist eine Einstellung auf einen Niederfrequenzausgang von 310mV durchzuführen.

ABGLEICHEN DER ENDVERSTÄRKERSTUFE

1. Es ist nichts an die Eingangsbuchsen des SX-939 anzuschließen; ein künstlicher Widerstand von $8\ \Omega$ ist über die Lautsprecheranschlüsse anzulegen.
2. Ein Millivolt-Gleichspannungsmesser ist zwischen Anschluß 10 (25) und Erde zu schalten.
3. Eine Einstellung soll so erfolgen, daß die Spannung auf Null gebracht wird.
4. Der Gleichspannungsmesser ist zwischen die Anschlüsse 50 (38) und 44 (32) zu schalten.
5. Eine Einstellung soll so erfolgen, daß die Spannung auf 50 mV gebracht wird.
